

## SD half-visor for humanitarian demining

SD have offered a half-visor for more than ten years. It was designed for use by dog handlers or supervisors who need to make clear and unobstructed voice commands. With the recent revisions to IMAS 10.30, it can now be used by any deminer when the risk-assessment allows this. It may, for example, prove popular as an alternative to goggles worn by deminers standing to excavate using rakes.

The SD Half-visor is made using 5mm untreated polycarbonate and meets the requirements of IMAS 10.30 (2009). It can be made Long or Short – as shown in the photograph on the right. The longer version covers more of the wearer's forehead. *Please specify long or short when ordering.*

Each visor is numbered for identification and replacement purposes. The complete Half visor and head-frame weighs around 500g).

The half-visor can be fitted to a [Comfort head-frame®](#) that is made from polyamide for durability. A 2013 refinement makes the Comfort head-frame even more comfortable around the ears. The fixings are made from heat-formed polycarbonate, which provides durability and flexibility. The nylock® nuts used to fasten the visor to the head-frame should be tightened so that the visor cannot be raised during use.

An optional Scratch-guard [SKU1019] is available. This is a thin sheet of polycarbonate that mounts securely over the half-visor to protect it from scratches during use, storage and transport.

Your organisation's logo (one colour) can be printed onto the Half-visor at no extra cost.

The visor face can be bolted inside or outside the head-frame wings, so accommodating broader heads.

***Because visors must be worn in the sun, and will be scratched no matter how careful you are, SD recommends that you follow the IMAS guidelines and replace visors annually***
