

Hawk body-armor apron for humanitarian demining

Always aiming to achieve comfort and value for money, our Hawk body-armor (NATO STANAG 2920 V50 – 450m/s) is versatile enough for deminers and supervisors, providing vital area protection whether walking around or excavating anti-personnel mines. It is lighter and more comfortable than alternatives, and includes several special design features.

The Hawk body-armor can be worn short, medium or long, depending on your activity at the time. Adjustment is as simple as unfastening a Velcro tab.

With a multi-layer Kevlar/polyamide inner covered by a washable outer designed to be exceptionally longlasting and resistant to abrasions, tears and scuff, it weighs less than 2.5kg.

The shoulder-straps are partly elasticated. After adjustment to suit the individual, they need not be undone again.

The Hawk includes genital-protection that can be worn when wanted, and folded away inside the armour cover when it is not wanted.
