

## SD Mask-visor for humanitarian demining

Having first made mask visors in 1996, SD have now adopted a "Mask-visor" design first publicised in 2008. The Mask-visor design is now the property of SD and has been duly registered®.

We have introduced the Mask-visor to try to serve the community better and help reduce the temptation to raise the visor, SD now offer the Mask-visor" and the "Platinum full-face visor" (SKU1012), both of which are light and allow good air circulation. To make the visor more comfortable to wear for long periods, we have also introduced the "comfort head-frame®". This year, our Comfort head-frame has been refined to make it even more comfortable around the ears.

The SD mask-visor® is made using 5mm untreated polycarbonate. It has two "mandibles" with spaces between that allow air to the wearer's nose and mouth without leaving gaps for blast from below to enter. It is supplied with a coloured sunshield. This reduces reflections on the inside of the visor and also reduces the risk of scratching if the visor is put down carelessly. The nylock® nuts used to fasten the visor to the head-frame should be tightened so that the visor cannot be raised during use.

Your organisation's logo (one colour) can be printed onto the mask-visor at no extra cost.

*Because visors must be worn in the sun, and will be scratched no matter how careful you are, SD recommends that you follow the IMAS guidelines and replace visors annually\*.*

The head-frame has a double strap for better stability and comfort.

Anti-scratch stand-off

The visor face can attach inside or outside the head-frame, allowing a comfortable fit on wider heads.
