

SD Platinum full-face visor for humanitarian demining

The new (December 2009) lightweight Platinum SD full-face blast visor is 20% lighter than our popular traditional model. Both are made using 5mm untreated polycarbonate, as required in the UN's IMAS 10.30. Both can be supplied with a 1mm polycarbonate scratch-guard.

The head-frame supplied is our latest "comfort" model (design registered®) with two Velcro fixing straps across the back of the head. The head-frame includes a padded forehead strip that should be removed and washed regularly.

If there is too much pressure on the sides of your head, the user can remove the visor bolts and reposition the head-frame supports on the outside of the visor. This makes the frame a full 2cm wider. The Nylock® fixing bolts should be tightened after adjustment so that it is not possible to lift the visor face during use.

Your organisation's logo (one colour) can be printed onto the visor at no extra cost.

SD Part no.: SKU1011

Creative trimming has reduced weight and helped to increase stability and comfort.

The Platinum visor alongside the traditional full-face visor.

Our "Comfort" head-frame® has double straps at the rear to increase stability.

The frame can be attached inside or outside the visor. When outside, the frame is wider to allow for those with wide heads.

Because visors must be worn in the sun, and will be scratched no matter how careful you are, SD recommends that you follow the IMAS guidelines and replace visors annually.*
