

SD Head-frames for visors in humanitarian demining

We offer the "SD Standard" or the "SD Comfort®" head-frames.

Both head-frames are made from ballistic polyamide for durability. The fixings are made from heat-formed polycarbonate, which ensures durability and flexibility. The visor face bolts to the fixings to prevent the visor being raised at the wrong times. Inside both head-frames is a removable washable sweatband to add to the wearer's comfort.

SD Standard head-frame [SKU1014]

Our Standard head-frame design was introduced in 1998 and was immediately popular. It has a single Velcro fastening strap across the top of the head and another at the back of the head.

SD Comfort® head-frame [SKU1015]

Because there is no single head-shape, our 2009 alternative head-frame adds to comfort and stability with two straps across the back of the head. The lower strap ensures greater comfort and visor stability. A 2013 refinement gives even greater comfort around the ears.

Our new Mask-visor and Platinum full-face visor have been designed to allow a further adjustment.

When the pressure on the wearer's head is uncomfortable, the attachments from the head-frame to the visor can be moved to the outside of the visor face, so allowing for wider heads. The adjustment adds 2cm to the diameter of the head, greatly increasing the "hat-size".

Our Standard visor and Platinum visor are shown above. The width adjustment described below is not possible on the Standard visor.

Both the SD Mask-visor (above) and the SD Platinum full-face visor (below) are designed to be used with the Comfort® head-frame.

To relieve pressure on wide heads, move the visor face inside the head-frame fixings.
