

SDV body-armour apron for humanitarian demining

The SDV body-armour (NATO STANAG 2920 V50 – 450m/s) is versatile enough for deminers and supervisors, providing vital area protection whether walking around or excavating anti-personnel mines. The design is simple and effective.

The SDV body-armour can be worn short or long, depending on your activity at the time. Adjustment is as simple as unfastening a Velcro tab.

With a multi-layer Kevlar/polyamide inner covered by a washable outer designed to be exceptionally long lasting and resistant to abrasions, tears and scuffs, it weighs 2.5kg complete with a polyamide chest insert that brings vital area protection above the IMAS requirement of STANAG 2920 450 m/s.

The ventilated high-performance Nylon-6,6 back does not provide protection, but does ensure that the weight rests on the shoulders and so increases comfort.

A large collar interfaces with the SD visor range, so providing assured frontal protection in line with IMAS 10.30.
